MEMORANDUM

DATE: November 8, 1992

TO: Britton

FROM: Erin

RE: Patents currently being worked on by Newman

*COPY IT TO ME*

Wireless Alarm - Serial #782,345 - This is a Division of Patent #5,095,493, which was a division of the "mother" Wireless Alarm patent. Newman's office will be filing a response to an Office Action by Nov. 7th, however, since James would not sign the declarations, other actions will have to take place (i.e. file a "Uncooperative Employee" declaration).

Binary Phase Shift Keying Modulation - Serial #850,692 - This is a CIP of Patent #5,119,396. Newman's office will be filing a response to the Office Action, adding new claims and teachings, and filing a Terminal Disclaimer by Nov. 26th.

PCT Application for BPSK - Serial #PCT/US92/01988 - Newman's office has recently file a Demand to Enter Into Chapter 2, which allows you to have the longest period of time upon which to file foreign patent applications. We have also paid patent fees for an International Search Report.

Frequency Agile Radio - Serial #880,268 - I sent Newman your response to the Office Action on October 5th. The response is due in to the Patent Office by Nov. 21st. We have not yet received a draft Amendment from Newman's office for you to approve. I'll call and check on the status.

Transmitter Programming - Mailed retainer of \$1,500.00 on 11/5/92 for Anthony to begin prosecution of patent.

*CIP THAT WAS DISAPPOINTED - TRY TO GET A COPY*

*Attached*

*Please just LOOK at them. Don't write on them, it's our only copy.*

(OK, pre)  
Button

The application they submitted as the "mother patent" application. I guess who attached form ~~2A~~ tells the examiner which claims to look at. I also attached the amendment that was filed last week in response to the Office action.
